TITLE : DISHWASHER

ABSTRACT : PROBLEM TO BE SOLVED: To improve washing performance and shorten washing time by sorting areas into an area where the feeding water amount of washing water is much and an area where the feeding water amount is less depending on locations to be set in a dishes basket, preventing light dishes such as resin tableware from dropping from the tableware basket by the washing water of the same spraying force as a conventional machine, and also, spraying more washing water to tableware with much fouling than other dishes.

SOLUTION: In a washing tank 8, a first washing nozzle 12 and a second washing nozzle 13 which spray washing water, are independently arranged rotatably in the approx. horizontal direction, and the washing water is fed from a washing pump 16 to the first washing nozzle 12 and the second washing nozzle 13. The first washing nozzle 12 and the second washing nozzle 13 are constituted in such a manner that the horizontal projected surfaces of the rotating tracks may be superposed.
